

PROJECT PROFILE

Southwest Harbor, Fire Department Southwest Harbor, Maine

Project:
Municipal Building
Southwest Harbor, Maine

Designers:
The Sheridan Corp.

Use:
Fire Department

Services:
General Contractor

Completion Date:
Fall 2006

Early Completion and within budget provides a building solution.

The town of Southwest Harbor knew the criteria needed for a new fire station, but as is so often the case, they were working within very strict budget requirements. Sheridan met with the town selectmen, the fire department and local residents and through a creative team effort and value engineering were able to meet budget and break ground on this 9,840 square foot facility.

The Sheridan Corporation provided a facility to include 5 apparatus bays with a custom designed exhaust mitigation system, meeting and office areas, with a dispatch and lobby area and a workshop area including a storage and repair area for the town's antique fire engine. The Sheridan Corporation's design-build philosophy resulted in a facility any town would be proud of and was completed early and within the town's budget.
