Construction

Distribution Addition

Orington, Maine

Client Name

Penobscot Energy Recovery Company

Delivery method

Pre-Engineered

Designer

General Electric

Project Size

54,060 sf

The PERC facility, which sits on a 42-acre lot includes several structures. These structures all have varying purposes, such as tipping/processing, Glass/Grit conveying, Cooling Tower Pumphouse, Lime Slacker, Maintenance and Administration Buildings.

Sheridan partnered with General Electric, who was the general contractor for this project. Sheridan provided the PERC facility with structural steel, roofing, and wall systems. Construction was completed on this compound in 1988.

Building on our promise.
