

Delta Ambulance

Ambulance Dispatch

Project Location

Waterville, Maine

Delivery Method

Design-Build

Designer

Sheridan Construction

Project Size

Varying

After being the selected general contractor to complete Delta Ambulance's facility modernization project in Augusta, Sheridan Construction proved their capabilities and attention to detail, and was asked to design and build their new facility in Waterville.

Sheridan incorporated a Butler Manufacturing pre-engineered metal building into the structural design. Design-build mechanical and electrical subcontractors were solicited to provide proposed systems and budgets. These companies were then interviewed, and the selections were made based upon qualifications, the proposed system functionality and longevity, and overall cost. The selected mechanical system included an open geothermal system.

The project consists of a 7-bay garage able to park up to 14 ambulances, vehicle exhaust system, and office space, which was architecturally enhanced by full-height brick veneer and EIFS fascia exterior wall system with plentiful windows allowing for delighting and views.

Building on our promise.
