

**Project Location**

New Market, New Hampshire

**Delivery Method**

Design-Build

**Designer**

Sheridan Construction

**Project Size**

13,000 sf

After coming to the realization, they did not have adequate space in their current fire house, the town of Newmarket, New Hampshire partnered with Sheridan Construction to design and build their new fire house. This new municipal building will also be home to the public works department as well.

Sheridan Construction was responsible for the retrofitting of the existing building. This portion of the project consisted of new wall panels and overhead doors, new offices, and work areas for the public works department.

Additionally, the new building features eight apparatus bays, offices, meeting rooms, and storage space. Newmarket now has a Fire House fit to take care of their dynamic New England town.
